Research Profile

I develop and analyze iterative algorithms for statistical learning and large-scale optimization, with an emphasis on provable finite-sample and convergence guarantees. My work spans stochastic and constrained minimax optimization, variance reduction, expectation-maximization (EM) for mixed linear regression, distributed and federated learning, and optimal-transport-inspired variance reduction.

Education

Purdue University **2021 – Present**
Ph.D. in Electrical and Computer Engineering *West Lafayette, IN*
Advisor: Prof. Abolfazl Hashemi; Machine Intelligence & Networked Data Science (MINDS) Group.

Purdue University Northwest **2019 – 2021**
M.S. in Electrical and Computer Engineering *Hammond, IN*

Beijing Institute of Technology **2015 – 2019**
B.S. in Telecommunication Engineering *Beijing, China*

Selected Theoretical Contributions

Variance reduction and randomized algorithms

- Developed a unified high-probability analysis of stochastic variance-reduced estimators using a new Freedman-type inequality, including mirror-descent guarantees in Banach spaces and improved oracle complexity for expectation-constrained optimization. paper [4] **[NeurIPS submission; reviewer ratings at decision: 5, 5, 4]**
- Developed unbiased randomized midpoint estimators that correct discretization bias in nonlinear extragradient updates; used antithetic sampling to cancel first-order variance terms and established guarantees for root finding, constrained variational inequalities, and smooth convex-concave games. paper [2]
- Formulated strong antithetic maps and indices to maximize negative dependence while preserving a target law, connecting optimal antithetic coupling to geometric optimal transport for Monte Carlo integration, approximation, and stochastic optimization. slides [1]

Distributed stochastic minimax optimization with constraints

- Designed a single-loop, primal-only Softmax-weighted switching-gradient method for worst-client optimization under stochastic constraints; established convergence under full and partial client participation with logarithmic high-probability dependence. paper poster code [5] **[UAI 2026]**

Dynamics and statistical guarantees of EM for mixed linear regression

- Derived explicit population EM updates across all signal-to-noise regimes; proved that noiseless iterates lie on a cycloid, estimated the super-linear convergence exponent, and improved finite-sample statistical error bounds. paper poster [8] **[ICML 2024]**
- Extended the trajectory analysis to unknown mixing weights and regression parameters, establishing linear-to-quadratic population convergence and arbitrary-initialization finite-sample guarantees. paper code [6] **[IEEE TIT R&R; revised manuscript submitted]**
- Characterized overspecified EM with jointly estimated regression parameters and mixing weights, proving distinct linear and sublinear regimes and deriving iteration, sample, and statistical-accuracy guarantees in population and finite samples. paper code [7] **[TMLR 2026]**
- Proved consistency and asymptotic normality with maximum-likelihood covariance for path-integrated score matching in mixed linear regression with unknown mixing weights under suitable diffusion schedules; derived exact fixed-noise decompositions linking the score-matching loss and gradients to EM operators. paper [3]

Research Experience

Research Assistant, MINDS Group, Purdue University — **Aug. 2025 – Present**
PI: Prof. Abolfazl Hashemi — *West Lafayette, IN*

- Design variance-reduced and randomized methods for stochastic minimax and expectation-constrained optimization, with convergence and oracle-complexity guarantees.
- Develop federated-optimization algorithms for full and partial client participation under communication and resource constraints within the NSF project *Learning through the Air: Cross-Layer UAV Orchestration for Online Federated Optimization*.

Research Assistant, VIPER Laboratory, Purdue University — **Aug. 2021 – May 2022**
PIs: Prof. Edward J. Delp and Prof. Fengqing M. Zhu — *West Lafayette, IN*

- Investigated hierarchy-aware learning for fine-grained food recognition in the Technology Assisted Dietary Assessment (TADA) project and generated labeled UAV imagery with image-to-image GANs for the PhenoSorg plant-phenotyping project.

Research Assistant, CIVS, Purdue University Northwest — **Feb. 2020 – May 2021**
PIs: Prof. Chenn Zhou, Prof. Bin Chen, and Prof. Lizhe Tan — *Hammond, IN*

- Built DNN and LightGBM models for the Smart Ladle steel casting-temperature predictor using process data from SQL databases; developed robust multi-camera, multi-laser algorithms for structured-light metrology.

Teaching Experience

Teaching Assistant, Purdue University ECE — **May 2022 – Aug. 2025**
ECE 69500: Optimization for Deep Learning; ECE 20001/20002: EE Fundamentals — *West Lafayette, IN*

- **ECE 69500:** Supported instruction in stochastic gradient methods, generalization, and distributed learning; held office hours and graded homework and exams. slides video
- **ECE 20001/20002:** Led office hours and help sessions, graded assessments, coordinated TA activities, and compiled an ECE 20001 practice-problem collection. problems video

Selected Presentations

Poster Presenter, Midwest Machine Learning Symposium (MMLS 2026), Purdue University, West Lafayette, IN event June 2026

Professional Service

Journal reviewer: IEEE Transactions on Signal Processing; Stochastic Systems.
Conference reviewer: NeurIPS; ICLR; UAI; AISTATS; AAAI; IEEE ISIT; IEEE ICME; CVIS.
Memberships: IEEE Young Professionals; IEEE Signal Processing Society; IEEE Computer Society.

Selected Research Software

`SoftmaxSGM`	Implementation of the UAI 2026 Softmax-weighted switching-gradient method.
`em_overspecified_mlr`	Numerical experiments for the TMLR 2026 analysis of overspecified EM.
`cycloid_em_mlr`	Numerical experiments and visualizations for the ICML 2024 cycloid analysis.
`smart_ladle`	LightGBM casting-temperature predictor with SQL integration, tested and deployed at Steel Dynamics' Butler Division. SDI Butler
`hierarchy_classification`	PyTorch reimplementation of hierarchy-aware food classification and embedding.
`Kmeans-tsne-visualization`	C++/Qt/OpenGL application for interactive visualization of t-SNE embeddings and k-means iterations.

Leadership, Mentoring & Outreach

- **Graduate Student Mentor, English Training in Engineering (ETIE):** designed machine-learning and computer-vision project frameworks and mentored undergraduate research in sequential prediction and 3D reconstruction.
- **Coordinator and Host, Science Communication Contest:** coordinated participants and judges and organized a science communication program serving more than 3,600 students.
- **Team Leader, Mathematical Modeling Contests:** led model development and implementation for national and international competitions, earning a CUMCM Second Prize and an ICM Honorable Mention.

Selected Awards & Honors

NeurIPS Conference Travel Grant	2025
AIST Hunt-Kelly Outstanding Paper Award, third place	2022
AIST Digitalization Applications Technology Best Paper Award	2021
Innovative Practice Outstanding Student (top 5%)	2019
National Third Prize, Energy Saving and Emission Reduction Competition	2017
Interdisciplinary Contest in Modeling, Honorable Mention	2017
Contemporary Undergraduate Mathematical Contest in Modeling, Second Prize	2016

Technical Background

Theory: stochastic, constrained, minimax, and nonconvex optimization; variance reduction; non-asymptotic statistical analysis; EM and latent-variable models; distributed and federated learning; dynamical systems.

Computation: Python, Mathematica, MATLAB, C/C++, SQL, Bash; PyTorch, TensorFlow, NumPy, SciPy, scikit-learn, pandas, OpenCV; Linux, Git, Docker, CMake.

Selected Coursework

Optimization for Deep Learning; Statistical Machine Learning; Probabilistic Machine Learning; Estimation Theory; Reinforcement Learning; Real Analysis; Linear Algebra; Introduction to Mathematical Statistics; Model-Based Image and Signal Processing.
